

HYEJI KIM (Alex)

QA Tester · Manual Testing · Usability · Gen AI Evaluation · Seoul, South Korea

kimhj.business@gmail.com · kimhj-alex.github.io/QA-Portfolio · Available for remote roles worldwide

PROFESSIONAL SUMMARY

Detail-oriented QA tester with a natural instinct for identifying usability failures, logic gaps, and broken user flows across web and mobile platforms. Background in education, content creation, and software development provides a cross-disciplinary perspective — able to think like a developer, communicate like a writer, and test like a real user. ISTQB CTFL certified, with a strong foundation in manual testing methodologies, exploratory testing, and usability analysis. That habit extended into hands-on Gen AI evaluation over the past year — documented as narrative case studies covering app development, creative writing, and business planning — now building toward CT-GenAI. Fluent in English, Spanish, and Korean.

QA PORTFOLIO HIGHLIGHTS

Independent exploratory testing across real-world platforms, and narrative Gen AI evaluation case studies. Full portfolio hosted at github.io.

GitHub Usability Audit · 4-Finding Deep Dive

Remote | 2026

- Identified undiscovered folder creation method requiring prior knowledge of slash convention — no UI affordance exists
- Identified missing deployment feedback on GitHub Pages — no propagation status or delay warning, causing users to re-trigger commits that cancel in-progress deployments
- Found delete button inaccessible on Brave browser at time of testing (Apr 2026) — cross-browser compatibility gap, since resolved by GitHub
- Reported inadequate DNS configuration guidance during custom domain setup, causing non-technical users to require external help

ISTQB Website Audit · 5-Finding Deep Dive

Remote | 2026

- Discovered search filter bug causing a valid accredited exam provider to be excluded from results when filtering by certification type
- Identified non-functional language selection: switching to Korean or Spanish produces partial/no translation
- Found accessibility button with no tooltip or aria-label, rendered inaccessible to the screen-reader users it serves
- Reported undisclosed glossary PDF export — critical resource hidden behind non-obvious workflow with no download CTA
- Documented quiz blank screen with silent UI state change — users have no indication of what action is required

Shoebox Planner Self-Audit · 7-Finding Self-Audit

Remote | 2026

- Built and audited Shoebox Planner, a room planning PWA — conducted checklist, exploratory, and cross-device regression testing across desktop and iPad
- Found 7 bugs across undo/redo logic, save/load data loss, and touch-specific regressions in layer controls, color changes, and context menus

Individual Platform Findings · Exploratory Testing

Remote | 2025–2026

- Gmail: Account delegation feature entirely absent from mobile app — no in-app guidance, workaround only discoverable via desktop browser request
- Instagram: Incomplete pricing disclosure on mobile ad platform — no fee amount, no web comparison, misleading UX
- TikTok: Silent follow restriction on new accounts — feature appears to work but silently fails with no user feedback
- Etsy: Missing product category for wireless earbud cases — forces sellers to miscategorize, reducing discoverability for buyers
- KDP: Vague category conflict warning with no explanation of indexing logic or impact on discoverability
- Squarespace + Gmail: Form submissions collapse into single thread; undocumented workaround requires modifying client-facing form
- YouTube Studio: Inconsistent music detection for uploads — no manual override, only fix is deleting and re-uploading
- Google Calendar: No date jump navigation + mobile search hard-limited to two-year window with no option to expand

Gen AI Case Studies · Narrative Evaluation, 3 Cases

Remote | 2026

- App Development — The Ellipse Math Shortcut: identified an AI coding assistant defaulting to a workaround over correct collision math, and a rotation-gated shortcut recurring across multiple fix attempts, isolated via black-box testing
- Creative Writing — Consistency Across Books: caught cross-project fact inversion, a correction that fixed a scene's description without its underlying logic, and a manuscript misattribution that led to a fully invented scene, across two published novellas
- Business Planning — Confidence vs. Correctness: found a settled pricing decision regenerated from scratch, reassurance substituting for a direct answer, and correct arithmetic run on the wrong rate card while building a real service's pricing and policies

Event Calendar Web App · Personal Project — Developer & QA Tester

Remote | 2025

- Designed and built Lately Seoul — an event calendar for Seoul with a public-facing UI and a separate curator CMS, featuring date navigation, event card interactions, multi-filter search (region, price, category), archive, and public event submission — built with HTML, CSS, JavaScript, and GitHub
- Designed and tested dual user flows: visitor experience and authenticated curator dashboard with add/edit/hide/delete functionality
- Front end complete and live at hwarinnim.github.io/latelyseoul · Backend in progress

WORK EXPERIENCE

Indie Creator & Digital Product Designer · Shoebox & Co.

Remote | Sep 2025 – Present

Independent creative and technical practice spanning digital product design, self-publishing, and hands-on software testing across self-built tools.

- Designed and launched 100+ surface pattern designs across Spoonflower, Etsy, and Printree
- Created 40+ educational resources for Fig & Fern Classroom (TPT)
- Built and launched Shoebox Planner, a room-layout PWA, and Hello Ink, a bilingual tattoo-booking service — both from scratch using HTML, CSS, and JavaScript, in collaboration with an AI assistant
- Conducted independent QA testing across self-built apps, websites, and self-published books — checklist, exploratory, and cross-device regression testing, plus hands-on Gen AI output evaluation — documented in a public QA portfolio (3 platform audits, 8 bug reports, 3 Gen AI case studies)
- Self-published a fiction catalog via Amazon KDP, co-written with an AI writing collaborator
- Managed end-to-end product lifecycle: concept, design, listing, quality review, and iteration

Grade 3 Homeroom Teacher · Gangnam International School

Seoul | Aug – Sep 2025

- Taught full curriculum in English; managed documentation, parent communication, and scheduling

Spanish Language Teacher · BC Collegiate

Seoul | Aug 2023 – Dec 2024

- Developed original curriculum for Grades 6–9; led event planning and administrative coordination

Administration Specialist · BC Collegiate

Seoul | Jun 2022 – Aug 2023

- Managed bus coordination, attendance, personnel records, and formal document creation
- Translated academic and administrative documents between Korean and English

Founder & Manager · Minari Bakery

El Salvador | Apr 2019 – Jul 2021

- Founded and operated a Korean-style dessert shop; managed all operations, branding, and customer service

EDUCATION & CERTIFICATIONS

ISTQB CTFL (Foundation Level)

KSTQB · 2026 · PASS

B.A. Hispanic Language & Literature

Seoul National University, 2017 · Minor in English

TOEIC 990 / Speaking 200

2021

DELE C1 Spanish Proficiency

2024

Culinary Arts Diploma

Academia Panamericana de Arte Culinario, 2019

SKILLS & TOOLS

Testing: Regression · Smoke · Sanity · Usability · Accessibility · Bug Reporting · Test Case Documentation

Gen AI Evaluation: Prompt-level defect isolation · Context-drift & hallucination detection · Cross-session consistency checking

Methodologies: Agile · Scrum · Exploratory Testing · Manual Testing

Tools: Jira (familiar) · GitHub · Firebase · VS Code · Google Workspace · Notion

Platforms: Web · Mobile · Tablet · Cross-browser testing

Languages: English · Spanish · Korean

Design: Procreate · Adobe Fresco · PatternDraw · Canva · Affinity Photo
